palaJet®

REMOVING & IMPROVING

All endoprosthetic interventions pose various challenges for the surgical team. When cleaning the bone bed, the individual anatomy of the joints and the level of contamination require special tools to achieve an optimal cleaning result and to ensure that the prosthesis has a long-term survival rate.

The palaJet® pulse lavage system offers different attachments for the specific requirements of different endoprosthetic surgeries, which can be easily attached to the palaJet® handpiece using a click mechanism, thus facilitating thorough cleaning.

Product	Description	Content	REF
palaJet® Disposable Pulse Lavage System	Pulse Lavage System for single use, Knee and Hip Nozzles included	10	5156831
